Volume 2 • Issue 1

The Center for an Urban Future is New York City's home for independent research and innovative thinking about key issues affecting the five boroughs.

Inside

Subway Ridership Growth:

Citywide:

Top 100 Stations by percentage growth 1998-2008 p. 2-3

Subway lines with the most fast growing stations p. 4

By Borough:

Bronx p. 4-5

Brooklyn p. 6-9

Manhattan p. 9-11

Queens p. 12-13

Bus Ridership Growth:

Percentage growth in bus ridership: 1998-2008 & 2003-2008 p. 14

In this Issue:

Transit Overload: A station-by-station examination of subway ridership growth over the past decade

Facing a crippling budget shortfall, the Metropolitan Transportation Authority (MTA) is threatening to make 318 proposed service cuts to subway and bus lines across the five boroughs—meaning longer waits and more crowded and unpleasant rides as well as a number of subway lines and bus routes shut down altogether. But even as these cuts loom, subway and bus ridership in 2008 was higher than at anytime since 1965.¹ Moreover, although the cuts will have the most impact on people who live or work in the boroughs outside of Manhattan, our data shows that the number of daily transit riders in those areas has increased dramatically more in the last ten years than in Manhattan.

In this issue of *New York by the Numbers*, the Center for an Urban Future's monthly economic snapshot of the five boroughs, we take a look at the increase in average weekday ridership between 1998 and 2008 for every subway station in New York City and for bus riders per borough. Our analysis, based on data from MTA New York City Transit, show just how important the city's public transportation system has become for residents living outside the city center:

- 20 of the 22 stations with the largest percentage increase in subway ridership were either in the outer boroughs or in Manhattan north of 96th Street.
- In 2008, 62 stations outside of Manhattan had an average weekday ridership of over 10,000 people, up significantly from 46 stations in 2003 and 36 in 1998.
- More than a quarter of all New York City subway stations—111 out of 425—saw an increase in average weekday ridership of 50 percent or more during the past decade. Brooklyn accounted for nearly half (51) of those stations; there were 28 in Manhattan, 20 in the Bronx and 12 in Queens.
- 13 stations on the L line and nine on the N line were among the 50 fastest growing stations citywide. Other lines with several stations on the top-50 list: the 2 (seven stations), 3 (six stations), F (five stations), J (five stations) and M (five stations).

The growth in outer-borough bus ridership, meanwhile, dwarfed Manhattan's during the same period. Overall, 81.7 percent of the gain in bus riders occurred outside Manhattan. Queens experienced a 28.4 percent increase; Brooklyn a 21.9 percent increase; the Bronx a 23.5 percent increase and Staten Island a 28.4 percent increase. By contrast, Manhattan's bus ridership grew by only 7.6 percent since 1998. (It actually experienced a 6.7 percent decrease between 2003 and 2008, the only borough to do so.)

The Center's recent report on the challenges facing New York's middle class, *Reviving the City of Aspiration*, showed that commute times were an increasingly important quality of life issue for many residents in the city's outer boroughs. This new data makes a strong case that these residents should be seeing an increase in services rather than a dramatic cut—and it suggests that elected officials representing neighborhoods in Staten Island, Brooklyn, Queens and the Bronx might be well-served to pay as much or more attention to their transit-riding constituents as to the relative handful of car drivers into Manhattan.

Top 100 stations ranked by percentage growth in subway ridership from 1998 to 2008
